

Rationality, mysticism, logic and paraconsistent logics

"a rationalism that rationally accommodates some apparent irrationality. On this sort of approach, truth is beholden to rationality; but rationality is also ultimately beholden to truth"

- Zach Weber

Towards a "good enough" rationality? Reminds me both of Plato's *When Rationality Fails, Resort to Myth*, and Michael Polanyi's *Tacit Knowledge*: "We know more than we can say." But a philosophy of "Consistency is the bugaboo of the anal personality" certainly would seem to leave the door open to a lot of hogwash (even without bringing up Heisenberg and quantum physics).
