

2022feb11 Toxic Weedkiller Chemicals, including 2,4-D, Detected in Nearly 40% of People Tested in U.S. Study - EcoWatch

Inbox

Michael Gregory <aztoxics@gmail.com>

"From 2012 to 2020, use of 2,4-D has increased nearly 70%, and this is expected to continue rising, especially with the approval to use Enlist Duo. Enlist Duo is an approved chemical for genetically modified crops that contains both 2,4-D and glyphosate."
