

(2023 March 27) Decades later, high concentrations of DDT found across vast swath of California seafloor (The Guardian)

<https://www.theguardian.com/us-news/2023/mar/24/california-pacific-ocean-ddt-high-concentration>

"the contamination covered an area of seafloor larger than the city of San Francisco. . . . before Congress banned such activity, up to 2,000 barrels a month of acid sludge waste containing DDT were dumped off the coast. Workers sometimes poked holes in the barrel so they would sink more quickly"
